

Lawn Care: Can you get rid of the moss in my yard?

Yes. Typically we find moss in yards with high levels of moisture and very little drainage, soil acidity and composition can also affect the rate at which moss accumulates in your yard. When treating a moss issue in a lawn we typically use two or more of the following methods:

Moss Killer

Manual Removal

Aeration

Soil PH adjustment

Sometimes we have to treat the lawn multiple times in order to fully eradicate the moss from the lawn. even after full eradication, moss is likely to return, keep on top of moss by monitoring the PH level and aerating yearly. And always treat the lawn with moss killer at the first sign of any moss in your grass.
