

Lawn Care: Last time I fertilized I had orange dots show up in my driveway?

These orange dots and streaks are the result of Iron in your fertilizer, unfortunately the stains will take a while to fade away, we don't know of any way to remove them. Next time have us fertilize for you or use a fertilizer without iron. And always remember to clean up excess fertilizer from all concrete surfaces. if your lawn needs Iron, consider using a iron base liquid moss killer.
